Nutritionists measure the energy content of food in "calories" sometimes capitalized and abbreviated as Cal or sometimes C, or abbreviated kcal as if small calories were being used, where each food calorie represents 4,186 joules. This is equivalent to 1000 of the calories used in chemistry, and thus the food Calorie would be called a kilocalorie if small calories were being used. However, in chemistry calories have been deprecated as a scientific unit of measure in favor of joules, and therefore in common modern usage the word "calorie" usually refers to a food calorie. About three fourths of contact eczema are of the irritant type, which is the most common occupational skin disease.

Contact eczema is curable provided the offending substance can be avoided, and its traces removed from ones environment. When treating a common cold, Vitamin C always comes to mind in an instant. Nobel Prize winner Linus Pauling first discovered the positive effects of Vitamin C in alleviating the symptoms of the common cold. Though Paulings findings about the effects of Vitamin C are still controversial, a lot of doctors believe that it is still a very good first step to fight the [buy imiquimod in Australia](#) cold.
